Abstract:

PROBLEM TO BE SOLVED: To newly build up a remote monitor control system at a comparatively lower cost and to extend a remote management system almost, without a cost of a central management system side.

SOLUTION: This remote monitor control system consists of a central management system 1 that monitors occurrence of a fault in an object system to be monitored, remote management systems 2-4 and the Internet 6 which interconnects them. The central management system 1 is provided with a central management means 8, that receives monitor information informing occurrence of a fault sent from the object system to be monitored, a mail generating means 9 that automatically generates a monitor information transmission mail 13, on the basis of this monitor information and with an electronic mail server 11, that transmits a monitor information transmission mail 13 to the designated remote management system 2 via the Internet 6. The remote management system 2 is provided with an electronic mail application 12, that receives the monitor information transmission mail 13 sent via the Internet 6.
